**SILICA**  
**Woven Tape .020"TH**

**Physical Characteristics:**

Silica braided sleeving retains strength and flexibility to 1800F (982C). It is 96% silica (SiO<sub>2</sub>) and provides protection against molten metal splash and radiant heat for critical cooling hoses, hydraulic lines, electrical leads, and many other industrial applications. Silica resists continuous high temperatures and remains soft and flexible through repeated exposures.

**CONSTRUCTION**

Nominal Thickness: 0.020"  
Standard put up: 100FT/RL  
Standard nominal width: 1.5"  
Weave: Plain

**Other**

Material should be tested for its suitability in any application, particularly flexing applications at elevated temperatures. Users should also familiarize themselves with the MSDS before handling.
